## Feeder Cap & Ladder—Assembly Instructions

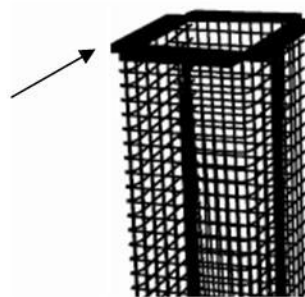

**\*\*NOTE\*\*** DO NOT USE CLIPS THAT COME ATTACHED TO YOUR FEEDER WITH CAP N LADDERS

- 1) Attach Cap to Feeder first by firmly pressing tabs onto outside of Feeder (it is easiest to do the outer snaps first, then work toward the center)
- 2) Pre-Bend Ladder(s) at hinge points along sides- Note: Make sure Ladder is bent so that the ridge along top is opening to the outside. (see detail below)
- 3) Fold to create rectangle
- 4) Firmly snap clips on edge together to secure. This may be easier if the ladder is laid flat. Snap the center clip first, and work outward.
- 5) Push Ladders into Cap until seated securely. (the flange of the Ladder will lay flush on the Cap when seated completely)

NOTE: When folded properly, flange on top of ladder should be on outside to create a shelf that will prevent ladder from falling into opening in cap.
